

Circularity of Indian River Lagoon Muck    Bob Pickert (Resident / Wakefield Biochar)  
Indian River Lagoon Slow Release Fertilizer & Soil Amendment                      January 5, 2026

I am Bob Pickert, long-time Brevard County resident, sailor, and lover of the IRL. I supported the initial SOIRL tax, and offer conditional support for a continued tax. I offer a general observation for improvement to the SOIRL program, and a specific proposal that would be good for the lagoon, watershed, and Brevard's economy; providing long-term funding to reduce or eliminate the SOIRL tax.

A Muck Fact Sheet on the SOIRL Project Plan website states (in part) "(The dewatered muck) can be used for beneficial purposes, if deemed to be safe and cost effective, or disposed of at a landfill, if contaminated".

The County Muckateers did step up and arrange for 4 samples of the Grand Canal muck from the Pineda dewatering site and the results indicate the muck is likely to serve as a good base for a pelletized biochar-based fertilizer-soil amendment. The utility of a biochar-amended muck comes from the incredible properties of biochar to absorb water and adsorb nutrients to make them bioavailable to plants while dramatically reducing the leaching to surface and groundwater, and improving drought resistance. Adding 60-75% biochar and other ingredients to the muck could:

- Transform the muck into a slow-release fertilizer and soil amendment,
- Distribute a high quality and permanent source of carbon to landscaped soils that would reduce the flux of nutrients and other contaminants to the lagoon,
- Provide a way for Brevard residents and business and learn about soil health that would contribute directly to the restoration of the lagoon, and
- Replace or supplement the SOIRL tax with a non-tax revenue from sales within (and beyond) the watershed.

Think of it as adding the activated carbon in your water pitcher to the soil, using clean sources of wood waste.

The sale of 2 million bags of IRL SRF & SA at \$45 per bag (typical rate for biochar) could generate \$100 million in sales, and provide Brevard County \$20-40M in net proceeds to pay for SOIRL programs. This could be implemented as a pilot project to demonstrate the commercial viability, and scaled-up through greater investment. It would require a focused marketing campaign but would likely build quickly. The result would be a Brevard industry, creating jobs and reducing taxes. You don't have to take my word for it, Sally Scalera of the UF IFAS County Extension called the idea "fantastic". Fertilizer companies are adding biochar to their products. Biochar also makes an effective stormwater treatment media.

This would require a lot of biochar – fortunately the Solid Waste Department is in the process of developing a plan for the reuse of the county’s woody waste, and could eventually produce all the biochar needed for this effort.

I would support a renewed tax providing it was supplemented with a parallel effort to create a commercial soil health initiative featuring the IRL muck, biochar, and other local ingredients.

I suggest the SOIRL Program drop its exclusive focus on funding the efforts of only non-profit organizations, and **engage the private sector** - - this should be an “all hands” effort.

In addition, I would strongly recommend the program revisit some of the directives in the original ordinance (2016-15) and the IRL Comprehensive Management Plan, including:

- “**not only allow, but foster** tools and techniques for restoration of the lagoon”,
- “To identify and develop **long-term funding sources** to preserve, protect, restore and enhance the IRL system”.

What are these other funding sources?

I support the efforts to improve the overall health of the Indian River Lagoon and the extension of the SOIRL Program.

Please accept the Florida Wildlife Hospital's 2024 annual report, 2025 stats are still being compiled, the annual report illustrates how our mission (rescue, rehabilitate, release) is connected to the health of the Lagoon.

Going forward as you discuss authorized work, please remember Florida Wildlife Hospital can provide supportive messaging in their outreach and education programs.

Keeping Wildlife Wild

# ANNUAL REPORT

2024

# Director's Letter

Dear Friends,

Wow, 2024 was quite a year! The most significant story of the year was our patient count. We saw 7,489 animals, about 1,400 more than in any other year in our 51-year history. It is obvious that the need for our services is rapidly growing. The general cost of doing business has gone up and with more patients, this increase is amplified. We are exploring new strategies, membership opportunities, and fundraising events to help us keep up with our increasing budget; we continue to be incredibly grateful for our generous donors and volunteers who make this growth possible. We made some significant improvements to our services last year:

- Our veterinarian, Dr. April Geer, moved from part-time to full-time, and two vet assistants joined the team.
- We completed a new outdoor education area with a grant from Oxbow.
- We added an education technician to the Education & Outreach team to increase the number of programs we provide annually.
- Thanks to having two minivans donated, we now have both an outreach vehicle and a release & rescue vehicle.
- We now have a separate triage building to mitigate disease transmission from incoming patients to current patients.
- Our VERY successful Giving Tuesday appeal raised nearly \$115,000! We can now build a new, larger workshop for our maintenance team. We hope to have the project completed by July 2025.

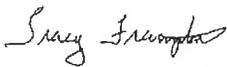

We had several challenges in 2024:

- We had over 40 Brown pelicans brought to us with suspicious wing fractures.
- We made the hard decision to cancel Hoot in the Park for the first time in its 10-year history due to the increased cost in hosting the event. However, we have heard the disappointment our supporters expressed over the cancellation, so we are hoping to "re-invent" Hoot in the Park in 2026.

We are excited for the future and have plans for growth in 2025:

- We added a development director to the team to help raise the resources needed to meet the growing demand for our services.
- We are exploring the exciting possibility of purchasing the neighboring property. This would allow us to add much needed wildlife rehabilitation areas, parking, and a visitor center. Best of all, it would allow us to open our facility for more public events!
- We have expanded our Board of Directors with some wonderful leaders from our community to better prepare for FWH's future sustainability.

We are so grateful for our supporters. Thank you! Alongside our donors, volunteers, community partners, and friends, we hope to be able to continue helping local wildlife well into the future.

Tracy Frampton

# Wildlife Rehabilitation

Our veterinarian Dr. April shows our vet extern how to do a complete physical examination on a royal tern.

In 2024, we rehabilitated 848 Eastern Gray Squirrels. A large percentage were orphaned and needed to be handfed.

Our volunteer rescued this belted kingfisher out of a ceramic cistern. After care, it was released and was immediately observed diving down to the water to go fishing.

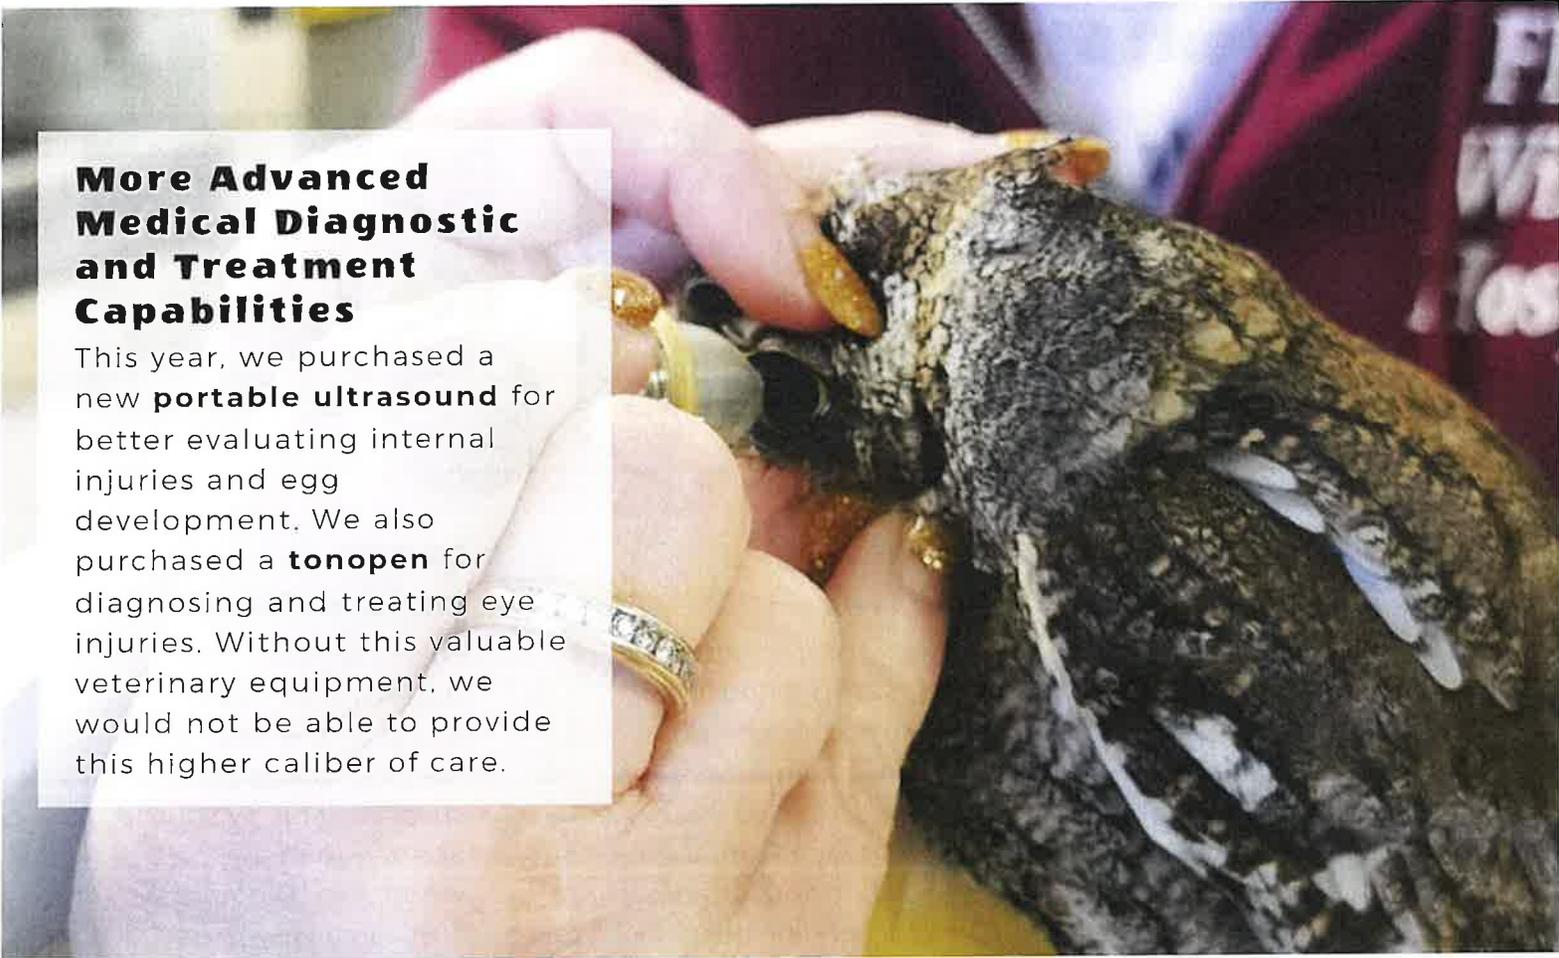

Each year we incubate any turtle or tortoise eggs that are laid by our patients. This year we had 24 babies hatch from our incubators and get released.

There was nothing common about this common snapping turtle rehabilitation. Their jaw had to be wired back into place after being hit by a vehicle.

Our new portable ultra sound, which we were able to purchase thanks to donations from the 2023 Giving Tuesday, is used to see if this armadillo is pregnant.

## More Advanced Medical Diagnostic and Treatment Capabilities

This year, we purchased a new **portable ultrasound** for better evaluating internal injuries and egg development. We also purchased a **tonopen** for diagnosing and treating eye injuries. Without this valuable veterinary equipment, we would not be able to provide this higher caliber of care.

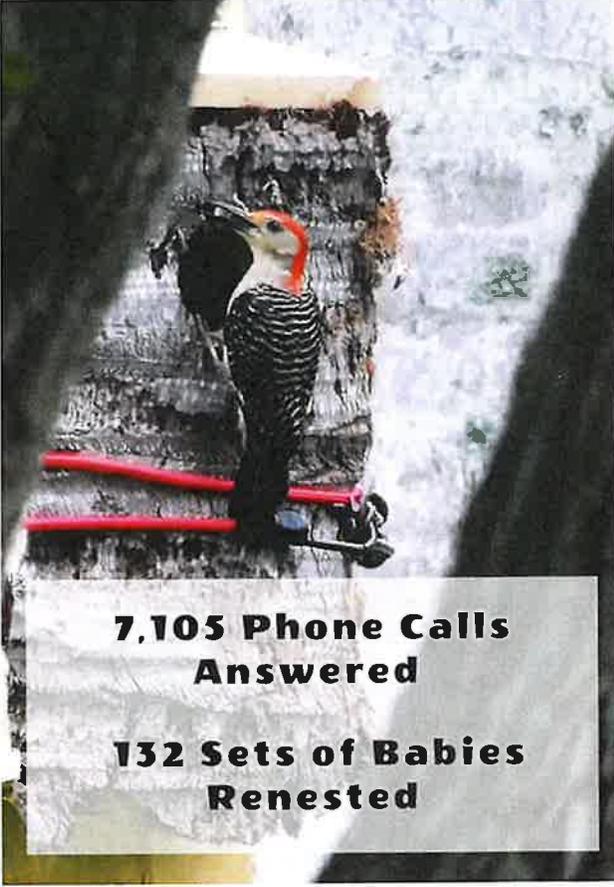

## Two Vans Donated for Transportation

We now have vehicles for taking ambassador animals to education programs, picking up supplies, and rescuing patients.

**Florida Wildlife Hospital**

# Patient Stories

**24-6288**

## Royal Tern

This avian patient was admitted after Hurricane Milton. They were in rough shape - body condition was thin, blood in their mouth, wounds on feet, and feather mites. Unlike many of our birds, this one was special in that it had a federal bird band which we reported and found out that this tern was 26 years old! It was originally banded in 1998 in North Carolina. The tern spent two months with us recovering from its trauma and was then successfully released back into the wild. We are hoping to start our own bird banding for brown pelicans in the next year so that we can learn more about their outcomes after rehabilitation and know whether we are seeing repeat patients, especially for things like fishing line entanglement.

**24-1982**

## Red Fox

This young fox kit was found orphaned in a ditch by Indian River County Animal Services and a volunteer from the Vero Beach Humane Society transported her to the wildlife hospital. She was emaciated, had fleas, and was infected with ear mites.

After medications and treatments for the parasites and fluids and a balanced diet to build back up to a healthy body condition, she was released after two months in care. We are so grateful to the other organizations that helped rescue and save this fox.

**24-4223**

## Florida Softshell

This turtle was admitted July 9th after being found on the side of the road in Rockledge, suspected hit by vehicle. She weighed a whopping 26 pounds! She had a very large laceration on the underside of her neck and jaw region and a fractured lower jaw. Our veterinarian performed two surgical procedures to close the wound and repair her broken jaw. Medical staff provided wound care and injectable antibiotics to help her heal and pain medications until the wound and jaw fully healed. As we like to say, turtles do everything slowly and so after almost 100 days in our Critical Care Unit, she was released in a large pond close to where she was found.

# 7,489 Total Patients

WE ARE ONLY PERMITTED TO TREAT AND RELEASE NATIVE AND MIGRATORY WILDLIFE.

# Research

We strive to not only help the animals in our care but also the larger populations through research partnerships. Animals that are unable to be saved are often used to further education and research.

## Ongoing Projects

- Assist **Florida Fish & Wildlife** with monitoring for diseases including:
  - Highly pathogenic avian influenza
  - Fraservirus
- Provide specimens for **Eastern Florida State College's** Vet Nursing Program
- Donate uncommon species to the **University of Florida's Museum of Natural History**.
- Provide samples to the **Department of Environmental Protection** in order to better understand the prevalence of plastics in aquatic avian species.
  - So far, **43%** of the birds examined contained some amount of plastic debris in their stomachs.

## New Projects

- **Monitor tick distribution** and disease by submitting samples to the **Florida Department of Agriculture**.
  - Track spread of the invasive Asian Longhorn Tick

We are very excited about our new collaboration with **Blue World Research Institute** to:

- Report animals **caught in hooks or fishing line** so they can study the anthropogenic impacts of activities, such as fishing, on wildlife.
- Conduct the first research study on **gopher tortoise taphonomy** (how they decay over time) so that the information can be used by governing bodies to prosecute entities that harm gopher tortoises.

## We are grateful for our research partners!

## Wildlife Abuse Investigation

In January and December of 2024, we saw a sudden influx of brown pelicans with suspicious wing breaks. **Blue World Research Institute** and a forensic veterinarian specialist from the **University of Florida** stepped up to investigate and documented the numerous cases of severe trauma, with evidence suggesting these injuries were intentionally human-caused. We collaborated with news agencies to try to spread the word in hopes that someone would be able to gather more evidence. We hope that our data collection and advocacy efforts help raise awareness and encourage stronger protections for these iconic birds.

## Florida Wildlife Hospital releases rescued otter pups

After months of rehabilitation, the Florida Wildlife Hospital in Palm Shores has released four rescued otter pups into the wild.

Rob Landers

“The average length of stay for an animal at the hospital is about nine weeks, FWH officials say, and the average cost of care per animal about \$130. But for otters the cost is closer to \$4,000 per animal.”

Jim Waymer

REPORT

## Florida Wildlife Hospital beats record for patient care

The nonprofit saw an increase of nearly 2,500 animal patients in 2024

By Brittany G. Ruachain for Hometown News | Jan 16, 2025

These baby cottontail rabbits were in good luck when they were brought to the care of the Florida Wildlife Hospital.

## Florida Wildlife Hospital Currently Caring for a Large Number of Animals

**Tim Shortt**

Published 5:07 a.m. ET Sept. 22, 2024 | Updated 11:22 a.m. ET Sept. 24, 2024

Helping injured or orphaned wildlife not only benefits the animals but also fulfills a deep emotional need for the people who find them. Many who bring animals to our rehabilitation hospital express a profound sense of responsibility and connection to nature, seeking reassurance that their efforts make a difference. Providing care for these animals offers a sense of hope and healing, turning feelings of helplessness into action. This bond between humans and wildlife is at the heart of our mission, reinforcing the importance of compassionate conservation and the role each person plays in protecting the natural world.

# Volunteers

This year, our incredible volunteers dedicated **17,098 hours** of their time, energy, and passion to support our mission. From assisting with wildlife care and rehabilitation to organizing events and educating the community, their contributions have been invaluable. Their time is equivalent to having an additional eight employees.

Volunteers are the backbone of Florida Wildlife Hospital, enabling us to expand our reach and make a greater impact. Their commitment ensures that every animal receives the care it deserves and that our community stays informed and engaged.

We are endlessly grateful for their compassion, hard work, and unwavering dedication to keeping wildlife wild. Thank you for being the heart of everything we do!

## Group Volunteers

We also had several groups assist with projects. Students from **Eastern Florida State College** helped us create enrichment designed to increase foraging skills, **L3Harris** had multiple groups come out to help keep our fence line clear and **Suntree Methodist** coordinated volunteers who helped us sort newspaper for baby birds and move dirt to get our raccoon enclosure ready for more patients.

## Scouts

Scout **Emma R.** from **Troop 4373** built platforms with netting for our seabirds. The platforms will be used for birds that are too sick to be able to stand.

## Interns

In 2024, we hosted our **first vet extern**, an educational opportunity we are able to provide now that we have a veterinarian on staff, in addition to eight other vet technician and animal care interns.

Community members reached

**\$8,860**  
Raised to help keep wildlife wild

The Florida Wildlife Hospital plays a crucial role in community education and conservation. Our outreach programs teach the public about living harmoniously with wildlife. They raise awareness about issues such as habitat preservation, coexistence strategies, and preventing unnecessary harm to animals. It also lets people know we are here to help. Our **13 education animals** act as ambassadors for wildlife, eliciting joy and wonder and as a result, spreading vital awareness about the importance of coexisting with our wild neighbors. In doing so, they inspire others to join the cause and become stewards of our natural world.

In 2024 our education program expanded by:

- Doing the highest number of offsite programs in our history
- Offering onsite kid's workshops with crafts and STEM activities for the first time
- Setting up displays about wildlife in our local libraries
- Building a Little Library onsite with books about nature
- Adding a Virginia Opossum to our education animal collection. Meet **Blossum**! She was admitted as a patient with a tail amputation. We think she was attacked by a predator. Due to the tail amputation she cannot be released because opossums have prehensile tails that they use for grabbing and carrying.
