District 2 Roads	73 - 127
District 3 Roads	128 - 152
District 4 Roads	153 - 192
District 5 Roads	193 - 217

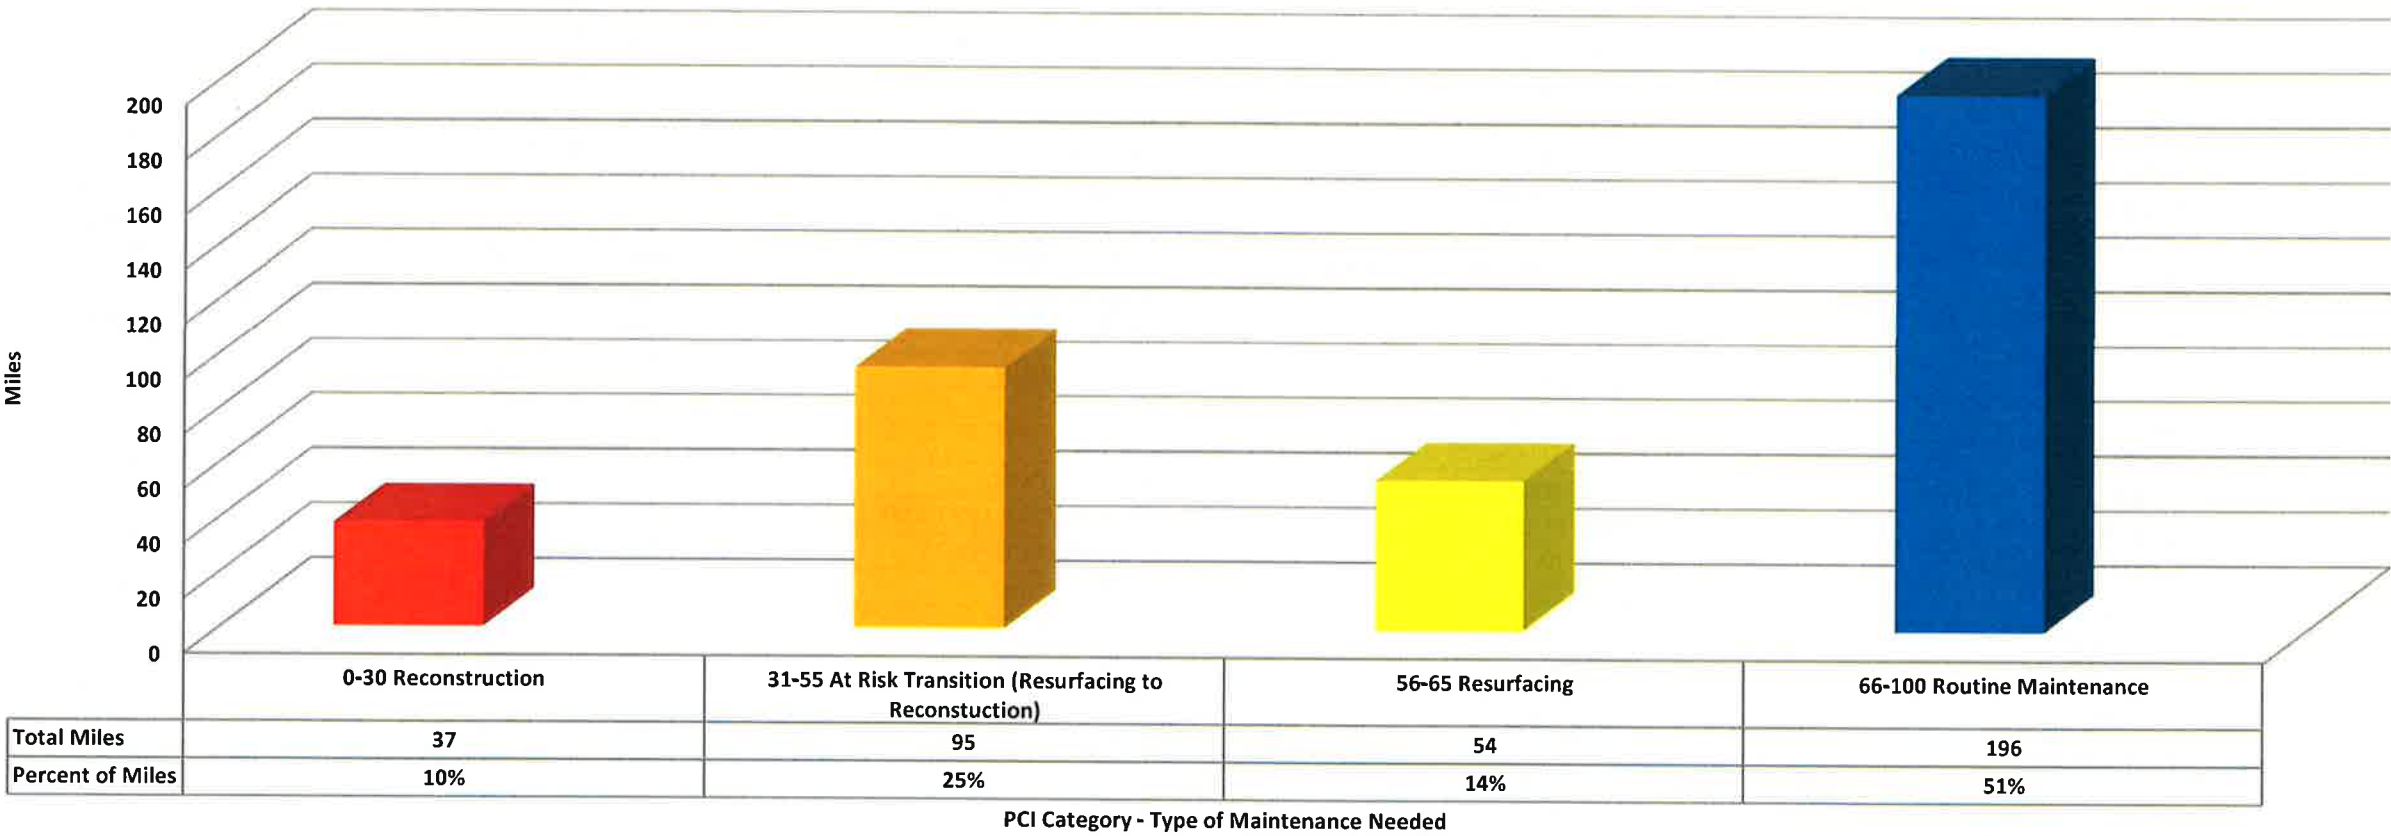

NOTE: The data shown herein was taken from the Kisinger, Campo & Associates, Corp (KCA) *Pavement Condition Assessment* for Brevard County. The KCA 2011 field data was used to extrapolate a 2017 pavement condition index (PCI) number for each paved road in the county network. The Pavement Condition Index (PCI) is an overall rating of road conditions on a scale from 0-100, with zero being a pothole-riddled crumbling street and 100 being a newly surfaced roadway. While every effort has been made to provide the most accurate and up to date information, pavement assessment is only an estimate, one that changes each year as pavement ages. As such, this information is to be used for planning purposes only.

The cost estimates are generalized amounts for planning purposes and cannot be used to estimate individual road expenses (not a substitute for a road specific cost estimate). The PCI should be re-evaluated on a 3-5 year interval to provide more reliable results.

DISTRICT 1 FY 2017-2018 SUMMARY			
	TOTAL MILES PAVED	PERCENT MILES	TOTAL PLANNED COST (UNFUNDED)
Reconstruction	37	10%	\$20,674,062.50
At Risk Transition (Resurfacing to Reconstruction)	95	25%	\$11,022,750.00
Resurfacing	54	14%	\$6,168,177.08
Routine Maintenance	196	51%	
Paved Roads	382		
Dirt Roads	68

Dirt Roads	152

NOTE: The data shown herein was taken from the Kisinger, Campo & Associates, Corp (KCA) *Pavement Condition Assessment* for Brevard County. The KCA 2011 field data was used to extrapolate a 2017 pavement condition index (PCI) number for each paved road in the county network. The Pavement Condition Index (PCI) is an overall rating of road conditions on a scale from 0-100, with zero being a pothole-riddled crumbling street and 100 being a newly surfaced roadway. While every effort has been made to provide the most accurate and up to date information, pavement assessment is only an estimate, one that changes each year as pavement ages. As such, this information is to be used for planning purposes only.

The cost estimates are generalized amounts for planning purposes and cannot be used to estimate individual road expenses (not a substitute for a road specific cost estimate). The PCI should be re-evaluated on a 3-5 year interval to provide more reliable results.

DISTRICT 4

NOTE: The data shown herein was taken from the Kisinger, Campo & Associates, Corp (KCA) *Pavement Condition Assessment* for Brevard County. The KCA 2011 field data was used to extrapolate a 2017 pavement condition index (PCI) number for each paved road in the county network. The Pavement Condition Index (PCI) is an overall rating of road conditions on a scale from 0-100, with zero being a pothole-riddled crumbling street and 100 being a newly surfaced roadway. While every effort has been made to provide the most accurate and up to date information, pavement assessment is only an estimate, one that changes each year as pavement ages. As such, this information is to be used for planning purposes only.

The cost estimates are generalized amounts for planning purposes and cannot be used to estimate individual road expenses (not a substitute for a road specific cost estimate). The PCI should be re-evaluated on a 3-5 year interval to provide more reliable results.

NOTE: The data shown herein was taken from the Kisinger, Campo & Associates, Corp (KCA) *Pavement Condition Assessment* for Brevard County. The KCA 2011 field data was used to extrapolate a 2017 pavement condition index (PCI) number for each paved road in the county network. The Pavement Condition Index (PCI) is an overall rating of road conditions on a scale from 0-100, with zero being a pothole-riddled crumbling street and 100 being a newly surfaced roadway. While every effort has been made to provide the most accurate and up to date information, pavement assessment is only an estimate, one that changes each year as pavement ages. As such, this information is to be used for planning purposes only.

The cost estimates are generalized amounts for planning purposes and cannot be used to estimate individual road expenses (not a substitute for a road specific cost estimate). The PCI should be re-evaluated on a 3-5 year interval to provide more reliable results.
